# Simulation of Networks and Telematics Applications

## MsC in Telematics Engineering

Dept. Ingeniería Telemática

2013/2014

Manuel Urueña

Jorge Ortín

Pablo Serrano

[muruenga@it.uc3m.es](mailto:muruenga@it.uc3m.es)

[jortin@it.uc3m.es](mailto:jortin@it.uc3m.es)

[pablo@it.uc3m.es](mailto:pablo@it.uc3m.es)

# Instructors

- **Ángel Cuevas**

[acrumin@it.uc3m.es](mailto:acrumin@it.uc3m.es)

4.1F15

- **Jose Alberto Hernández**

[jahgutie@it.uc3m.es](mailto:jahgutie@it.uc3m.es)

4.1A16

- **Antonio de la Oliva**

[aoliva@it.uc3m.es](mailto:aoliva@it.uc3m.es)

4.1A16

- **Manuel Urueña (coord.)**

[muruenga@it.uc3m.es](mailto:muruenga@it.uc3m.es)

4.0F08

# Requirements

- Statistics:
  - Basic concepts: Mean, median, mode, std. dev.
  - Descriptive: PDF, CDF, percentile.
  
- Programming:
  - Lists, loops, while(s)
  - C-alike, Matlab-alike.

# Learning Results

- Understanding of the basic building blocks of a simulation tool
- Ability to:
  - Design a simulation model adapted to a case study
  - Use a simulation tool in the field of telematics engineering
  - Develop the analysis tools needed to obtain results with statistical significance

# Syllabus

- (basic) Descriptive statistics
- Random number generation
- Transient analysis:
  - When to start
  - When to end
- Event-driven Simulation
- Use of simulation tool
  - OMNeT++

# Assessment

- No final test
- Laboratory sessions (see schedule) will be the basis for the assessment
- Assessment based on:
  - Handing in a report
    - In class
    - A week after
  - Q&A during class

# Course Schedule

Date	Room	Description
24/09/2013	4.1E02	Presentation
08/10/2013	4.1E02	Basic Statistics
15/10/2013	4.1B02	LAB
22/10/2013	4.1E02	Random Variable Generation
29/10/2013	4.1B02	LAB
05/11/2013	4.1E02	Transient and Steady states
12/11/2013	4.1E02	Event-Driven Simulation
19/11/2013	4.1B02	LAB
26/11/2013	4.1B02	LAB
03/12/2013	4.1E02	Use of a simulation tool
10/12/2013	4.1B02	LAB
17/12/2013	4.1B02	LAB
